

- Custom connector
- Press fit connector

**We cooperate and develop custom connectors for CASE, ADAS, telematics, sensor and so on.
We can propose miniaturized design (weight / space saving).**

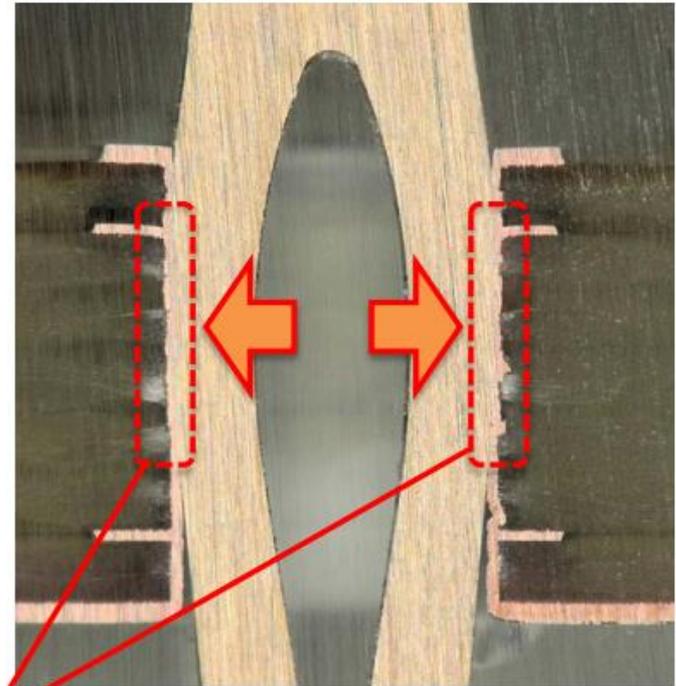

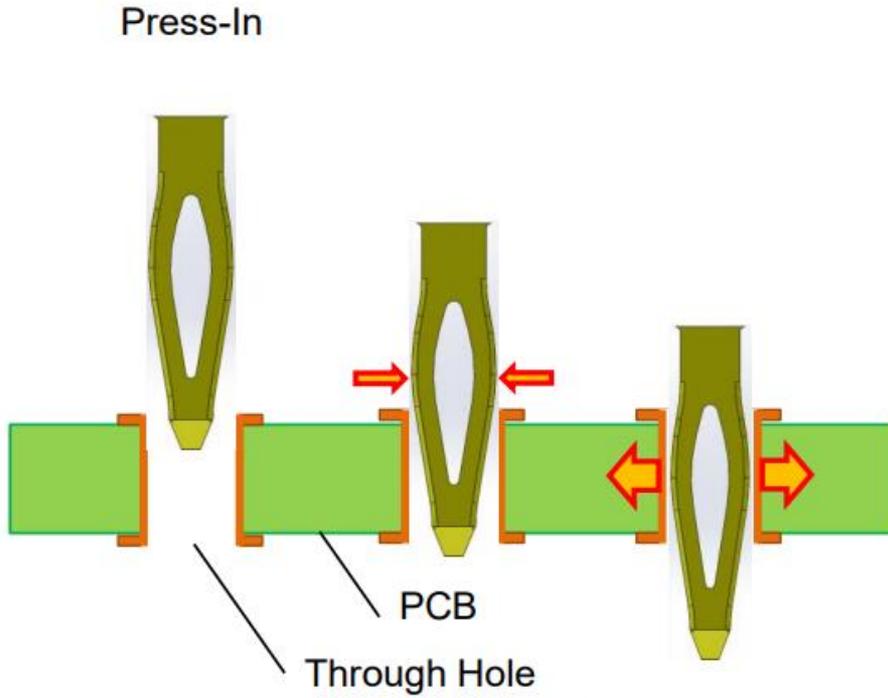

1) Advantage

- Solderless connecting
- Decrease Thermal Stress
- Environmental measures

2) Disadvantage

- Narrow pitch design
- Machine or JIG is required for insertion

Contact position = Conduction position

The repulsive force of the Press Fit Terminal spring generates a contact force that presses the terminal against the inner wall of through hole on PCB. This contact force brings the terminal surface and inner wall close contact, creating electrical continuity.

- Our Press Fit Terminals are custom products.
- Press Fit Terminal shape is our original shape.
- We will cooperate with you to satisfy the required performance of Press Fit Terminal.
- We will evaluate Press Fit Terminal on PCB used by customer and share the evaluate results.
- We will also cooperate with you regarding the evaluate of other items(Molding products, etc.) after consultation.
